

The Biology Behind Preparing Honey Bee Colonies for Almond Pollination

Gordon Wardell, Ph.D.

17th Australian Almond Conference

HOSTED BY:
The Almond Board of Australia

SUPPORTED BY:
Horticulture Innovation Australia Ltd

Pullman Hotel Melbourne, Albert Park, Victoria
November 8th - 10th, 2016

Dr Gordon Wardell

Director of Pollination Operations, Wonderful Orchards

Gordon earned his Ph.D. in Entomology with emphasis in Apiculture at Michigan State University in 1982. Following his degree he worked for 12 years in International Apicultural Development in regions from Nepal to Fiji, with most of his time spent in Indonesia, Malaysia and Thailand helping improve beekeeping potential.

In 1988 he joined the faculty of the University of Maryland as the extension apiculturist. After moving to Arizona in 1996 he established and managed a research and development company dedicated to implementing innovative solutions to entomological and apicultural problems including the development of the honey bee nutritional supplement, MegaBee®.

In 2009 Gordon accepted a position as Director of Bee Biology with Paramount Farming Company California's largest almond grower. His duties include overseeing honey bee health and nutrition, coordinating pollination efforts for the company's almond orchards and investigating the solitary bee, *Osmia lignaria*, as possible pollinator of almonds.

In addition, Dr. Wardell is currently the chairman of Project Apis m, a non-profit organization dedicated to improving honey bee health and funding innovative research. He is a science advisor to the Almond Board of California and a lecturer at California Polytechnic University.

The Scope of Almonds In California

17th Australian
Almond Conference
November 8th - 10th, 2016

- **Spanning 500 miles (800 km) throughout the Central Valley**
 - 2015: 445,000 ha
- **6,800 growers**
- **105 handlers**
 - 67% of operations are 100A or less*
 - >90% family-owned
- **~ 2 Million Honey Bee Colonies Required to Adequately Pollinate the Crop**

Almond Production by County 2014/15

Osmia lignaria, Blue Orchard Bee

Almond Conference
November 8th - 10th, 2016

Pollinators of fruit and nut trees

Wonderful Orchards

**17th Australian
Almond Conference**
November 8th - 10th, 2016

- Almonds 15,000 ha
 - 70,000 Colonies
- Pistachios 17,000 ha
 - Wind Pollinated
- Pomegranates ~ 5,000
 - 13,000 colonies

Training the Inspectors

**17th Australian
Almond Conference**
November 8th - 10th, 2016

Training the Inspectors

**17th Australian
Almond Conference**
November 8th - 10th, 2016

Colony Grading

- Four teams of inspectors
- Grade 14,000 colonies in 3 weeks

Colony Rental and Incentive

17th Australian
Almond Conference
November 8th - 10th, 2016

- Base Fee for an 8 Frame average
 - Five frame minimum
- Plus a Bonus Structure
- \$7.50 bonus for frames 9 and 10
- \$5.00 bonus for frames 11 and 12
- Total bonus for a 12 frame colony \$25.00

Hand Held Data Recording

**17th Australian
Almond Conference**
November 8th - 10th, 2016

Socket Data Recorder plus GPS

Grading Maps

**17th Australian
Almond Conference**
November 8th - 10th, 2016

Mapped All Grades

More Evidence – Protein Matters

RELATIONSHIPS BETWEEN CONSUMPTION OF A POLLEN SUPPLEMENT, HONEY PRODUCTION, AND BROODREARING IN COLONIES OF HONEYBEES APIS MELLIFERA L. I.

Keith M. DOULL 1980

TABLE 1. – Relationships between consumption of a commercial pollen supplement and honey production in honeybee colonies. Means per colony of five colonies in each group.

	Treatment Colonies	Control Colonies	L.S.D. $P = 0.05$
No. of bees reared	167,849	149,931	N.S.
Honey/colony (kg)	344.586	249.7	83.625
Honey/bee (g)	2.05	1.66	.35
Area of stored pollen (dcm ²)	394.56	299.6	N.S.
Supplement + consumed (mg/bee)	30.2	–
