

Evapotranspiration (Eto) for the last 7 days was 19.4 mm (27 April – 3 May) at Robinvale.

For moderate vigour almonds with a Kc value of 0.3, this results in an approximate water requirement of 7 mm for this period. This is 2 mm less than the previous week.

Cumulative Eto for the next 7 days is forecast to be 15.4 mm (4-10 May), which relates to an approximate water requirement of 4.6 mm.

These figures are approximate only and should be adjusted based on variety, crop load and canopy and vineyard/orchard floor management.
