

Evapotranspiration (Eto) for the last 7 days was 47 mm (1-7 Dec) at Robinvale.

For moderate vigour almonds with a Kc value of 1.07, this results in an approximate water requirement of 50.3 mm for this period. This is 3.6 mm more than the previous week. This figure may be influenced by any effective rainfall for your property.

Cumulative Eto for the next 7 days is forecast to be 60.5 mm (8-14 Dec), which relates to an approximate water requirement of 64.7 mm.

These figures are approximate only and should be adjusted based on variety, crop load and canopy and orchard floor management.
