

Evapotranspiration (Eto) for the last 7 days was 54 mm (3-9 February 2025) at Robinvale.

For moderate vigour almonds with a Kc value of 0.8, this results in an approximate water requirement of 43.2 mm for this period. This is 3.4 mm less than the previous week. This figure may be influenced by any effective rainfall for your property.

Cumulative Eto for the next 7 days is forecast to be 54.5 mm (10-16 February 2025), which relates to an approximate water requirement of 43.6 mm.

These figures are approximate only and should be adjusted based on variety, crop load and canopy and vineyard/orchard floor management.
